

# 4K

## TOKEN OF LOVE & FREEDOM

# OFFICIAL WHITE PAPER

Version 1.0 | 29 September 2026

**Four Keys. One Movement.**

Kindness   Knowledge   Koinonia   Karma

This document reflects the direction agreed by the 4K core group as of the date above. It describes the project as it exists today and separates current facts from future directions.

# 1. Purpose of this White Paper

This White Paper is the official public description of the 4K project as of 29 September 2026. Its purpose is transparency: to explain what 4K is, why it exists, what has already been built, how the community is intended to participate, what Brian is, how the social-impact model is intended to work, and which technological directions may be explored in the future.

4K is not presented as a promise of wealth. No person can responsibly guarantee the future market value of a token, a currency, a technology or any other asset. 4K therefore avoids guaranteed-return language, artificial hype and fictional partnerships. The project is built as a long-term technological, research, community and social-impact initiative.

## 2. What 4K Is

4K is a community-driven project combining blockchain technology, artificial intelligence, research, software development, social participation and charitable ambition. The 4K token is one component of that larger idea. It is intended to function as a symbol of belonging, participation and shared values - not as the final purpose of the project.

The world is entering a period of rapid change driven by artificial intelligence and automation. Jobs, education, creativity, finance and everyday life may change substantially. 4K wants to participate in that transition technologically while keeping a human focus: people, community, learning, mutual support and responsible experimentation.

## 3. The Four Keys

Kindness. Respect, empathy and the intention to create positive impact rather than hostility.

Knowledge. Learning, testing, research, education and sharing what is discovered without pretending to know everything.

Koinonia. Community, participation, cooperation and the belief that technology should connect people rather than isolate them.

Karma. Responsibility for the consequences of what we build, publish, automate and send into the world.

These Four Keys are intended to remain a reference point for communication, technical decisions, community development and future governance.

## 4. Origin and Philosophy

4K grew from a small group of friends fascinated by cryptocurrency, blockchain, computing, electronics and the early acceleration of artificial intelligence. The original impulse was simple: build something interesting, learn by doing, share it with other

people and see how far an honest idea can develop.

The name 4K became both a recognizable technological expression and a framework for four values. The project developed organically through private work, conversations, travel, meetings with crypto enthusiasts, experiments, servers, software, liquidity pools and continuous learning. The intention has never been to manufacture a story for a market. The intention is to build a story through real work.

## 5. The 4K Token Today

The principal current 4K token operates on Solana. Its official Solana mint address is:

B86RCJ7ai5pedHkfcPBFaK93ed7uCfT3K7qG7qL1TxA

Public third-party blockchain data available at the date of this document indicates that additional minting is disabled and freezing is disabled. Token metadata remains mutable. The token is currently unverified on some third-party registries and liquidity remains limited. These facts are important and should not be hidden.

The supply is not being expanded by the project. Some tokens have previously been burned. Because on-chain state can be independently inspected, readers should verify current supply, holder distribution, liquidity and authority status directly before making any decision involving the token.

## 6. Beyond One Blockchain

4K does not assume that its future must remain confined to a single blockchain. Solana is the principal environment for the current phase of development, while earlier 4K work on Ethereum remains part of the project's history and technical experience.

Possible long-term research directions include multichain architecture, bridges between ecosystems, a dedicated 4K wallet and, if future scale and technical needs justify it, research into a dedicated blockchain or other distributed infrastructure. These are directions, not delivery promises. No fixed timetable is attached to them. The project deliberately preserves the freedom to adopt technologies that do not yet exist today.

## 7. Community First

The community is intended to be the heart of 4K. Participation is not defined by the size of a wallet. A person with a small amount of 4K may contribute far more to the movement than a passive large holder.

The developing Top 30 / Top 100 community system is designed to recognize visible, constructive contribution: discussion, ideas, comments, sharing, educational activity, participation in votes, support on X, Telegram and other channels, and other forms of genuine involvement. Membership criteria and automation are still evolving.

Holding at least a trace of the 4K token may be used as a simple on-chain sign of participation. The quantity held is not intended to determine community rank. Eligible active participants may receive discretionary 4K rewards. Such rewards are not guaranteed returns and the rules may evolve as monitoring tools and the community

develop.

## **8. Brian - The Research and Technology Engine**

Brian is an internal 4K technology project and belongs to the wider 4K ecosystem and community vision. It is being developed as a research-and-development platform involving automation, market research, decision systems, data, risk controls and experimental trading infrastructure.

Brian is not a finished product and is not represented as a guaranteed profit engine. Its architecture and direction continue to change as testing produces new information. The project has already required substantial private expenditure, equipment, infrastructure, specialist work and time. These historical inputs are treated primarily as research and learning costs.

The ambition is that Brian may eventually generate sustainable economic value. If that happens, the project intends to use that value not only for further research and operations but also for measurable social benefit.

## **9. Liquidity and Market Infrastructure**

4K has experimented with multiple liquidity pools and trading pairs. The purpose is broader than simply enabling a single venue for buying and selling. Multiple pools can distribute liquidity across venues and create opportunities for independent market participants to arbitrage price differences between pools.

This architecture does not eliminate volatility, manipulation risk, slippage or loss. Arbitrage may contribute to price convergence, but it is not a stabilization guarantee. Liquidity can remain shallow and market conditions can change quickly. 4K treats liquidity architecture as both infrastructure and an area of continuing research.

## **10. The Intended 50/50 Social-Impact Model**

If Brian and other 4K-developed activities eventually generate net profit, the project's target model is to allocate 50% of net profit to social and charitable purposes. This is a target operating model for a profitable future phase, not a representation that such profits currently exist.

The charitable 50% is intended to be fully accountable. The project intends to publish the amount allocated, the recipient or purpose, available transaction evidence and, where possible, acknowledgements or certificates from recognized organizations. Small charitable contributions have already been made historically as early demonstrations of this philosophy, but future reporting should rely on verifiable records rather than unsupported claims.

The remaining 50% of net profit is intended as the operational share of 4K. It may be used for research, servers, software, network fees, specialists, development, events, community activity, infrastructure or other legitimate project purposes. Private

historical funding, personal time and every individual operating expense are not subject to the same public accounting commitment as the designated charitable share.

## **11. Funding and Independence**

4K has been funded primarily through private resources contributed by members of the core group, together with small informal purchases and support from friends and people introduced to the project at meetings and events. The project has not been built around a promise that outside capital will be returned according to a fixed schedule.

This independence is one reason 4K does not publish artificial deadlines simply to satisfy a marketing roadmap. The team prefers to learn, build and release when a component is sufficiently understood rather than promise dates that cannot responsibly be guaranteed.

## **12. Governance Today and Tomorrow**

Today, strategic direction is set by the founder together with a small core group of five friends and contributors, including people involved in ideas, design and technology. Some contributors currently choose to remain publicly anonymous.

Community input is already sought through public channels, although participation is still small. As the community matures, the project intends to experiment with more structured voting and wider participation in selected decisions. If 4K becomes sufficiently established, the long-term ambition is to share meaningful governance rather than keep the project permanently dependent on one individual.

## **13. Future Legal and Organizational Structure**

4K currently remains an evolving project rather than a fully mature institutional structure. If activities begin to produce material fiat-denominated revenue or require formal contracting, the team expects to consider establishing a company, potentially in Poland or another suitable jurisdiction after professional legal and tax analysis.

A separate 4K charitable foundation is a longer-term aspiration for the social-impact side of the project. No foundation or corporate structure described here should be understood as already existing unless separately announced and legally registered.

## **14. Directional Roadmap**

4K uses directions rather than hard deadlines. Current and potential directions include continued development of Brian; community automation and reward systems; stronger public reporting; broader liquidity infrastructure; a dedicated website and public information layer; further AI and blockchain research; multichain experiments; a possible 4K wallet; future governance mechanisms; formal organizational structures when justified; and, in the long term, potentially a dedicated charitable organization and deeper distributed infrastructure.

Some of these directions may change, be delayed, be abandoned or be replaced by better ideas. The ability to change course in response to evidence is part of the research philosophy of 4K.

## 15. Risks and Responsible Participation

Participation in crypto assets and experimental technology involves substantial risk. 4K may experience extreme price volatility, low liquidity, smart-contract or infrastructure failures, cybersecurity incidents, regulatory changes, technical mistakes, dependency on third-party networks and services, or complete failure of individual research initiatives.

Nothing in this White Paper guarantees profit, token appreciation, liquidity, charitable distributions, successful development of Brian, delivery of future technologies or the continued existence of any particular feature. Statements about future development are intentions and research directions, not contractual promises.

Readers should independently verify on-chain information and obtain their own legal, tax or financial advice where relevant. 4K's goal is not to remove risk through words; it is to communicate risk honestly and build as responsibly as possible.

## 16. Closing Statement

4K is not a finished product. It is a long-term attempt to connect technology, community, research and real-world help. Its token is a symbol within that system. Brian is an evolving technological engine. The community is still small. The ambitions are much larger than the project today.

We do not know exactly where artificial intelligence, blockchain or society will be in ten or fifteen years. We do know the principles with which we want to enter that future: kindness, knowledge, community and responsibility.

**Build. Test. Learn. Help. Keep going.**

## Document Status

Official 4K White Paper - Version 1.0

Adopted: 29 September 2026

This document may be updated as the project evolves. Future versions should identify material changes and their publication dates.
